

Effective CPR

Now in Your Hands

The easy-to-use Intellisense™ CPR Feedback device works in combination with your Powerheart® G5 AED to deliver potentially life-saving CPR and defibrillator therapy.

Introducing the Intellisense CPR Feedback Device

Simple. Smart. And potentially life-saving. Meet the new Intellisense™ CPR Feedback device for the Powerheart® G5 AED. This breakthrough CPR aid from Cardiac Science provides you with voice and text feedback in accord with the 2015 AHA CPR Guidelines to help you perform expert CPR. A life may depend upon it.

Simple to Prep, Simple to Use

Rescuers can now easily perform effective CPR compression rate and depth based on the 2015 AHA Guidelines.* Simple place-and-press functionality requires no complicated preparation or product assembly, and a non-slip surface and oblong shape ensures steady placement during CPR.

Intelligent Technology, Effective CPR

Each device features Rescue Ready® technology, embedded smart circuitry, and a motion sensor to self-test for presence and functionality. With one touch from the Powerheart G5 display, CPR Feedback voice and text prompts are provided in an alternate language.

"Press Harder and Fully Release"

Built using a proprietary algorithm that monitors chest compression rate and depth for effectiveness, Intellisense CPR Feedback provides you with voice and text feedback when your compression depth needs adjustment. "Press harder and fully release" if compressions are shallow – with an emphasis on recoil. "Press softer" if compressions are too hard.
